GHATPULSE MP | HISTORICAL DECISION BRIEF
Ghat: Khatlapura ghat
Coverage: 2023-2025 | No live 2026 readings

PRIORITY SIGNAL
40.0/100 - illustrative Historical Exceedance Index, not an official risk, safety or regulatory assessment.

MEASUREMENT SUPPORT
DO: 0/3 (3 numerical readings); BOD: 3/3 (3 numerical readings); pH: 0/3 (3 numerical readings).
9 numeric DO/BOD/pH readings across 12 recorded observations.

SELECTED SOURCE EVIDENCE
2025 Ganesh / during: BOD 5.4 mg/l (Outside ; BOD > 3 mg/L; report page 28)
2025 Ganesh / after: BOD 5.2 mg/l (Outside ; BOD > 3 mg/L; report page 28)
2025 Ganesh / pre: BOD 4.4 mg/l (Outside ; BOD > 3 mg/L; report page 28)

EVIDENCE LIMITATIONS
1 not-sampled records ; 2 BDL observations (not zero). BDL means below detection limit, not zero. Unsampled records are not evidence of clean water. Site matching: marked high confidence; still verify original site labels. Historical results cannot establish present conditions, health outcomes, legal compliance or immersion approval. The BOD >3 mg/L rule is a challenge-provided comparator subject to confirmation of sampling and method comparability.

RECOMMENDED CHECKS
1. Request updated DO, BOD and pH sampling with documented time, phase, lab method and chain of custody.
2. Ask the laboratory to confirm BOD methodology before making regulatory interpretations.
3. Fill phase and parameter sampling gaps before comparing sites as equivalent.
4. Verify key entries and page references against the MPPCB PDFs before operational use.

SOURCE REFERENCES
